

Installation Instructions

Linux

1. **Download the Application:**

After purchasing the application, you will receive a download link via email or on your account on the website. Click on this link to download the file, which is typically in .zip format.

2. **Extract the Files:**

Open a terminal. You can find it by searching for "Terminal" in your applications menu. Navigate to the directory where the file was downloaded. For example, if the file is in the Downloads folder, use the following command:

```
cd ~/Downloads
```

Next, run the command to extract the contents of the file:

```
unzip filename.zip
```

This command will create a new folder containing the application files.

3. **Navigate to the Application Directory:**

Once the files are extracted, you need to navigate to the created folder. Use the following command:

```
cd path/to/extracted_directory
```

Replace path/to/extracted_directory with the actual path of the folder.

4. **Install Dependencies:**

Before you can run the application, you need to install the required Python libraries. This is usually done via a file named requirements.txt, which lists the dependencies. Run the following command:

```
pip3 install -r requirements.txt
```

If the requirements.txt file is not available, you will need to manually install the required libraries using:

```
pip3 install Flask Flask-SocketIO Flask-Limiter psutil python-nmap
```

5. **Configuration:**

Before launching the application, you may need to adjust some settings. Look for a configuration file, often named config.py. Open it with a text editor and modify the necessary settings, such as IP addresses and ports.

6. **Launch the Application:**

To start the application, run the following command:

```
python3 app.py
```

This will start the application server.

7. **Access the Application:**

Open your web browser and enter the following URL:

<http://localhost:5000>

This will allow you to access the application's interface.

Windows

1. **Download the Application:**

After the purchase, download the file, which is typically in .zip format.

2. **Extract the Files:**

Go to the folder where the file was downloaded (usually Downloads). Right-click on the .zip file and select "Extract All." Follow the prompts to choose a destination folder.

3. **Navigate to the Application Directory:**

Open the Command Prompt. You can do this by searching for " " in the Start menu. Type the following command to navigate to the extracted folder:

```
cd path\to\extracted_directory
```

Replace path\to\extracted_directory with the actual path of the folder.

4. **Install Dependencies:**

To install the required libraries, run the following command:

```
pip install -r requirements.txt
```

If the requirements.txt file is not available, manually install the required libraries with:

```
pip install Flask Flask-SocketIO Flask-Limiter psutil python-nmap pywin32
```

5. **Configuration:**

Open the config.py file in a text editor and modify any necessary settings for your environment.

6. **Launch the Application:**

Start the application by executing:

```
python app.py
```

7. **Access the Application:**

Open your web browser and go to:

<http://localhost:5000>

Mac

1. **Download the Application:**

After purchasing, download the file, which is typically in .zip format.

2. **Extract the Files:**

To extract the file, simply double-click on it. This will create a new folder with the application files.

3. **Navigate to the Application Directory:**

Open the Terminal (search for it in Spotlight). Type:

```
cd path/to/extracted_directory
```

4. **Install Dependencies:**

Run the following command to install the dependencies:

```
pip3 install -r requirements.txt
```

If the requirements.txt file is not present, use:

```
pip3 install Flask Flask-SocketIO Flask-Limiter psutil python-nmap
```

5. **Configuration:**

Modify the config.py file as needed before launching the application.

6. **Launch the Application:**

Execute the following command to start the application:

```
python3 app.py
```

7. **Access the Application:**

Open your browser and go to:

<http://localhost:5000>
